SAFETY INFORMATION

Please read, understand, and follow all safety information contained in these instructions prior to the use of this Vertical System. FAILURE TO DO SO COULD RESULT IN SERIOUS INJURY OR DEATH.

These instructions must be provided to the user of this equipment. Retain these instructions for future reference.

Intended Use:

This Vertical System is intended for use as part of a complete personal fall protection system.

Use in any other application including, but not limited to, material handling, recreational or sports related activities, or other activities not described in the Product Instructions, is not approved by 3M and could result in serious injury or death.

This device is only to be used by trained users in workplace applications.

⚠️ WARNING

This Flexible Cable/Rigid Rail System is part of a personal fall protection system. It is expected that all users be fully trained in the safe installation and operation of their personal fall protection system. Misuse of this device could result in serious injury or death. For proper selection, operation, installation, maintenance, and service, refer to these Product Instructions and all manufacturer recommendations, see a supervisor, or contact 3M Technical Service.

- To reduce the risks associated with working with a Flexible Cable/Rigid Rail System which, if not avoided, could result in serious injury or death:
  - Inspect all components of the system before each use, at least annually, and after any fall event. Inspect in accordance with the Product Instructions.
  - If inspection reveals an unsafe or defective condition in a component of the system, remove the component from service and destroy it.
  - Any Flexible Cable/Rigid Rail System that has been subject to fall arrest or impact force must be immediately removed from service and all components must be inspected by a Competent Person prior to being used again.
  - Do not connect to the system while it is being installed.
  - Ensure the system is appropriately rated for the number of simultaneous users.
  - When unpacking the cable it may rapidly uncoil. Use proper safety procedures and appropriate personal protective equipment when unpacking cable.
  - Only use approved connectors to attach body harness to the system. Do not use any additional connecting devices.
  - Use only cable specified and approved in the Product Instructions.
  - Do not interfere with the locking action of the shuttle/sleeve device. Only manipulate the device to attach and detach from the system.
  - Always maintain three points of contact while climbing. Refer to the Product Instructions for further information on proper climbing technique.
  - Ensure that fall protection systems/subsystems assembled from components made by different manufacturers are compatible and meet the requirements of applicable standards, including the ANSI Z359 or other applicable fall protection codes, standards, or requirements. Always consult a Competent and/or Qualified Person before using these systems.

- To reduce the risks associated with working at height which, if not avoided, could result in serious injury or death:
  - Ensure your health and physical condition allow you to safely withstand all of the forces associated with working at height. Consult with your doctor if you have any questions regarding your ability to use this equipment.
  - Never exceed allowable capacity of your fall protection equipment.
  - Never exceed maximum free fall distance of your fall protection equipment.
  - Do not use any fall protection equipment that fails pre-use or other scheduled inspections, or if you have concerns about the use or suitability of the equipment for your application. Contact 3M Technical Services with any questions.
  - Some subsystem and component combinations may interfere with the operation of this equipment. Only use compatible connections. Consult 3M prior to using this equipment in combination with components or subsystems other than those described in the User Instructions.
  - Use extra precautions when working around moving machinery (e.g. top drive of oil rigs), electrical hazards, extreme temperatures, chemical hazards, explosive or toxic gases, sharp edges, or below overhead materials that could fall onto you or your fall protection equipment.
  - Use Arc Flash or Hot Works devices when working in high heat environments.
  - Avoid surfaces and objects that can damage the user or equipment.
  - Ensure there is adequate fall clearance when working at height.
  - Never modify or alter your fall protection equipment. Only 3M or parties authorized in writing by 3M may make repairs to the equipment.
  - Prior to use of fall protection equipment, ensure a rescue plan is in place which allows for prompt rescue if a fall incident occurs.
  - If a fall event occurs, immediately seek medical attention for the worker who has fallen.
  - Do not use a body belt for fall arrest applications. Use only a Full Body Harness.
  - Minimize swing falls by working as directly below the anchorage point as possible.
  - If training with this device, a secondary fall protection system must be utilized in a manner that does not expose the trainee to an unintended fall hazard.
  - Always wear appropriate personal protective equipment when installing, using, or inspecting the device/system.
Prior to installation and use of this equipment, record the product identification information from the ID label in the Installation Checklist at the back of this manual.

**PRODUCT DESCRIPTION:**

Figure 1 illustrates the Lad-Saf® Flexible Cable Safety System. Figures 2 through 19 illustrate components of the Lad-Saf® Flexible Cable Safety System. See Table 1 for system component descriptions. See Table 2 for system component specifications.

**L1, L2, L3 and CE1 Systems will fit the following rung types and spacing:**

- Spacing: 9"-12.25" (200mm-310mm)
- Cylindrical rung: 0.5"-1.6" (13mm-40mm) diameter
- Square rung: 0.5"-1.6" (13mm-40mm)
- Diamond rung: 0.5"-1.6" (13mm-40mm) height
- Angle Iron: 0.5"-1.6" (13mm-40mm) leg height
- Rectangular rung: 0.5"-1.6" (13mm-40mm) height, 0.5"-1.9" (13mm-48mm) width

1.0 PRODUCT APPLICATION

1.1 PURPOSE: The 3M DBI-SALA LAD-SAF™ Flexible Cable Safety System (Figure 1) is part of a personal fall protection system. When used in combination with the Lad-Saf™ Detachable Cable Sleeve (sold separately), the Lad-Saf™ Flexible Cable Safety System is designed to protect a worker in the event of a fall while climbing fixed ladders or similar climbing structures. LAD-SAF™ Flexible Cable Safety Systems are intended to be installed on fixed ladders or ladder like climbing surfaces that are part of a structure (e.g., mono poles [wood, steel, or concrete] buildings, manways, antenna structures and towers). The personal protection equipment (PPE) which is selected will form an essential part of the system. Always wear a full body harness with a sternal (chest) attachment point, in accordance with ANSI Z359.11 or with the relevant national standard. When climbing, the user of the system should wear a climbing helmet which conforms to the national standard.

1.2 LIMITATIONS: LAD-SAF™ Flexible Cable Safety Systems are not intended to be installed on portable ladders. LAD-SAF™ Flexible Cable Safety Systems are designed for use on structures that are generally vertical. The safety system must not exceed a maximum angle of 15° from vertical. The following application limitations must be considered before installing the LAD-SAF™ Flexible Cable Safety System.

A. STRUCTURE: The structure to which the LAD-SAF™ Flexible Cable Safety System is installed must be capable of withstanding the loads applied by the system in the event of a fall (see Section 2.2).

B. SYSTEM CAPACITY: The number of users allowed on the LAD-SAF™ Flexible Cable Safety System at one time varies depending on the type of system and installation. Generally, LAD-SAF™ Flexible Cable Safety System capacities range from one to four users. See Table 2 for more information on capacity limitations. LAD-SAF™ Flexible Cable Safety System capacities are based on a maximum user weight of 310 lbs (140kg), including tools and clothing.

C. ENVIRONMENTAL HAZARDS: Use of the LAD-SAF™ Flexible Cable Safety System in areas with environmental hazards may require that additional precautions be taken to reduce the possibility of injury to the user or damage to the equipment. (e.g., high heat caused by welding or metal cutting, caustic chemicals, seawater, high voltage power lines, explosive or toxic gases, moving machinery, sharp edges).

1.3 SUPERVISION: Installation of the LAD-SAF™ Flexible Cable Safety System must be supervised by a Qualified Person.

1.4 TRAINING: The LAD-SAF™ Flexible Cable Safety System must be installed by persons trained in its correct application. This manual is to be used as part of an employee training program as required by OSHA. It is the responsibility of the installers of this equipment to ensure they are familiar with these instructions, trained in the correct care of this equipment.

1.5 Refer to applicable local, and national requirements governing this equipment for more information on vertical safety systems and associated components, including OSHA 1910.140, OSHA 1910.29, OSHA 1926.1053 and OSHA 1926.502.

2.0 SYSTEM CONSIDERATIONS

2.1 COMPATIBILITY OF COMPONENTS AND SUBSYSTEMS: This equipment is designed for use with 3M Fall Protection approved components and subsystems. The use of non-approved components and subsystems (e.g., harnesses, lanyards, sleeves, etc.) may jeopardize compatibility of equipment, and could affect the safety and reliability of the complete system. If you have questions on the installation or suitability of this equipment for your application, contact 3M Fall Protection.

COMPATIBILITY WITH CLIMB ASSIST SYSTEMS: 3M Fall Protection LAD-SAF™ Flexible Cable Safety Systems, including 3M Fall Protection LAD-SAF™ Detachable Cable Sleeves, are designed for use with 3M Fall Protection approved climb assist systems. The use of any other type of climb assist system may be incompatible with the LAD-SAF™ Flexible Cable Safety System and LAD-SAF™ Detachable Cable Sleeves, and could create a serious safety hazard for the user. Do not use non-3M Fall Protection climb assist systems without first consulting a competent person and/or a qualified person at your worksite for approval. If you have additional questions about compatibility, please contact 3M Technical Services.

ANSI Z359.1-2007 Safety Requirements for Personal Fall Arrest Systems, Subsystems and Components, requires a competent person and/or a qualified person to “ensure that systems assembled from components and subsystems made by different manufacturers meet the requirements of this standard.”

1 Qualified Person: A person with a recognized degree of professional certificate and with extensive knowledge, training, and experience in the fall protection and rescue field who is capable of designing, analyzing, evaluating, and specifying fall protections and rescue systems to the extent required by OSHA and other applicable standards.
2.2 **LOAD REQUIREMENTS FOR STRUCTURE:** The climbing structure to which the LAD-SAF™ system is installed must be capable of supporting the total loading imposed by the system.

A. **STATIC LOADING:** The static loads imposed onto the system include the weight of the top bracket, weight of the cable per length of system and a safety factor (SF). The following is an example for determining the static loading imposed on the system for a 100 ft (30 m) system:

   i. L3 top bracket weight = 24 lbs (10.9 kg)
   ii. 100 ft (30m) of 3/8” (9.5mm) 1x7 Galvanized cable weight = 27 lbs (12.3 kg)
   iii. **TOTAL STATIC LOADING:** 
       \[
       (24 \text{ lbs} + 27 \text{ lbs}) \times 1.2\text{SF} = 61 \text{ lbs} \]
       \[
       (10.9 \text{ kg} + 12.3 \text{ kg}) \times 1.2\text{SF} \times 9.81 \text{ m/s}^2 = 0.27 \text{ kN}
       \]

B. **DYNAMIC LOADING:** The following are the dynamic loads imposed onto the system per user:

   i. One user: 2,700 lbs (12 kN)
   ii. Two user: 3,320 lbs (14.76 kN)
   iii. Three user: 3,940 lbs (17.51 kN)
   iv. Four user: 4,560 lbs (20.27 kN)

C. **TOTAL LOADING:** The total load imposed onto the structure must take into account the static and dynamic loading given above for the length and type of system. Below is an example in determining total loading imposed onto the structure:

   i. Static loading for a 100 ft (30 m) system: 61 lbs (0.27 kN)
   ii. Dynamic loading for a two-user system: 3,320 lbs (14.76 kN)
   iii. **Total loading = 3,381 lbs (15 kN)**

The following Systems allow up to two users on the system at one time (see Table 2):
   Systems L1, L2, W1 and CE1.

The following Systems allow up to four users on the system at one time (see Table 2):
   Systems L3, M1 and M2.

For structures that require a continuous length of vertical lifeline over 500 ft (151m), 3M recommends the use of the following:

- 6116633 (4 users) – over 500 ft (151m) and up to 800 ft (242m).
- 6116633 (rated to 3 users) – over 800 ft (242m) and up to 2000 ft (606m).

- **The system can be rated to 2 users to lower the load imposed onto the attachment structure.**

- **Other installation requirements may limit the number of users allowed on a system. See section 3.0.**

**Bottom Bracket Assembly:** The bottom bracket connection must be capable of supporting a system pretension load of 350 lbs (1.6 kN) in the direction of loading.

For calculation purposes, the required bracket load may be assumed to be distributed evenly between the number of rung attachments.

### 3.0 SYSTEM INSTALLATION

3.1 LAD-SAF™ systems are designed for easy installation onto a variety of structures. To begin the installation you need to know the model numbers of the system, cable guides, standoffs and type of cable (galvanized or stainless steel). Figures 2 through 11 identify most models. Some brackets are designed to be installed using stand-off supports which go between the bracket and structure. You need to know model numbers of stand-off supports if included with your system. See Table 1 for model numbers of most stand-off supports. Follow the instructions for the models included in your system.

Generally, the LAD-SAF™ system is installed from the top of the structure down. The basic procedure is:

- **Step 1.** Install the top bracket
- **Step 2.** Connect the cable to the top bracket
- **Step 3.** Install the cable guides
- **Step 4.** Install the bottom bracket assembly
- **Step 5.** Tension the cable
- **Step 6.** Inspect the installation

Planning the installation can minimize the amount of time on the structure and improve safety.

- **Use proper safety procedures when installing LAD-SAF™ systems.**
- **Wear personal protective equipment, including safety glasses and steel-toed shoes.**
- **Use personal fall arrest or restraint systems when exposed to a fall hazard while installing LAD-SAF™ systems.**
- **Do not connect to the LAD-SAF™ system being installed.**
- **Do not connect to a partially installed LAD-SAF™ system.**
- **Use caution when installing LAD-SAF™ systems near electrical power lines. LAD-SAF™ cables are conductive.**

3.2 **WELDING RECOMMENDATIONS:** Some installations require welding brackets to the structure. DBI-SALA recommends that welding be completed by a certified professional welder in accordance with applicable national welding codes or standards. Base and filler materials must be compatible with galvanized or stainless steel, depending on the materials of your system. Protect finished welds from corrosion with coating or paint.
### 3.3 RUNG SUPPORT
Rung supports can be used to reinforce hollow rungs to reduce crushing or collapsing of the rung due to tightening of the Safety System Clamps, and to generally strengthen the rung. The Rung Support must have sufficient length extending on either side of the Side Rails to install Rung Support fasteners. Install rung support at each LAD-SAF™ component connection point. The structure must be evaluated by a qualified person to determine if the load requirements for the system are met.

Rung Supports are available in various shapes and lengths. For best results, select a Rung Support size that will fit closely with the inside dimensions of the rung. See Figure 19 for examples of rung supports.

</tbody>
</table>

Materials: Aluminum Bar, Stainless Steel Fasteners

Install at each point indicated below:
1. Slide the Rung Support through the open rung.
2. Slide Washers over each end of the Rung Support and secure with Nuts. Tighten Nuts until Washer's are flush against the Rail.
3. Insert Cotter Pins through the holes in each end of the Rung Support. Cotter Pins should be inserted from the top of the Rung Support to prevent them from dropping out of the holes.
4. Separate and bend the Cotter Pin Legs to ensure Cotter Pins stay in the holes and the Rung Supports can not slide out of the Rung.

### 3.4 TOP BRACKET INSTALLATION
Before installing the top bracket it is recommended that the climbing structure be evaluated by a qualified person to determine if the load requirements for the system are satisfied. The top bracket should be positioned to allow users safe access when connecting or disconnecting from the system. The top bracket is typically mounted in the center of the climbing surface for ease of climbing, but may be located towards the side if required.

#### A. INSTALLATION OF L1 AND L2 SYSTEMS:
See Figure 2 for a typical installation of the L1 and L2 Systems. The top bracket should be positioned to allow users safe access when connecting or disconnecting from the system. Do not substitute other fasteners.

Installation procedure:
1. **Top Bracket**: Slide rung clamps (B) over tube and install fasteners as shown. Torque fasteners as specified.
2. **Bottom Bracket**: Install fasteners as shown. Torque fasteners as specified.

#### B. INSTALLATION OF L3 SYSTEM:
See Figure 3 for a typical installation of the L3 System. The top bracket should be positioned to allow users safe access when connecting or disconnecting from the system. Do not substitute other fasteners.

Installation procedure:
1. **Top Bracket**: Slide rung clamps (B) over tube and install fasteners as shown. Torque fasteners as specified.
2. **Bottom Bracket**: Install fasteners as shown. Torque fasteners as specified.

#### C. INSTALLATION OF M1 AND M2 SYSTEMS:
See Figure 4 for a typical installation of the M1 and M2 System onto a monopole. The top bracket should be positioned to allow users safe access when connecting or disconnecting from the system. The top brackets are to be connected to the structure with a 3M DBI-SALA standoff or customer supplied stand-off support. Stand-off supports must support the loads specified in section 2.2, and must be compatible with the LAD-SAF™ system.

**Angle Leg and Round Leg Stand-off Installation**
See Figure 5 for the installation of the angle (A) and round leg (B) stand-off supports. Install stand-off supports using the hardware provided. Do not substitute other fasteners. Torque 3/8-inch fasteners to 20-25 ft-lbs (27-34 N·m).

Install the top bracket to the stand-off support using the 1/2-inch fasteners provided. Torque 1/2-inch fasteners to 40-45 ft-lbs (54-61 N·m).

**Weld-on Stand-off Installation**
Install the stand-off support (C) as shown in Figure 5. See section 3.2 for welding recommendations. The stand-off must be perpendicular to the pole surface and in-line with the carrier cable.

**Installations that use the angle leg or round leg stand-off support brackets are limited to one user on the system at a time.**

**M1 and M2 System Installation**
See Figure 4. Installation procedure:
1. **Top Bracket**: Install top plate (A), hardware (B) and Single Point Anchor assembly (C) as shown in Figure 4. Slide the D-Ring (D) over the assembly (C) before installing. Torque fasteners as specified.
2. **Bottom Bracket**: Install bolt, spacers and fasteners as shown. Torque fasteners as specified.
D. INSTALLATION OF W1 SYSTEM:
See Figure 7 for a typical installation of the W1 System on a wooden pole. The top bracket should be positioned to allow users safe access when connecting or disconnecting from the system. Use 1/2-inch fasteners (not provided) to attach the top bracket to the pole. Fasteners should extend through the pole when possible. 3M DBI-SALA recommends using lock washers, double nuts, or other methods to ensure fasteners will not loosen.

E. INSTALLATION OF CE1 SYSTEM:
See Figure 8 for a typical installation of the CE1 System. The top bracket should be positioned to allow users safe access when connecting or disconnecting from the system.
Installation procedure:
1. Top Bracket: Slide rung clamps (B) over tube and install fasteners as shown. Torque fasteners as specified.
2. Bottom Bracket: Install fasteners as shown. Torque fasteners as specified.

3.5 INSTALLATION OF CARRIER CABLE ASSEMBLY TO TOP BRACKET:
A. INSTALLATION OF CARRIER CABLE ASSEMBLY:
1. Lay the carrier cable assembly out on the ground in a clean area by rolling the coil. Do not pull cable from center of coil. For some installations it may be easier to lower the carrier cable from the top connection level down to the bottom bracket. If so, carefully lower the cable by unspooling without twisting the cable at the top connection. Do not drop the cable to the lower level.
   - Carrier cable is very stiff and may spring out of coil unexpectedly. Use proper safety procedures when unrolling cable. Use appropriate safety gear, including gloves and safety glasses, when unrolling cable.

2. See Figure 10 for installation of the carrier cable into the top bracket. Ensure the end of cable is free of kinks and unraveled strands.
   - Inspect the cable for shipping damage before proceeding. Do not install damaged cable.

3.6 INSTALLATION OF CABLE GUIDES, ALL MODELS:
Cable guides protect the carrier cable from chafing against the structure and to prevent the climber from excessively deflecting the cable from side to side. Cable guides should be positioned at approximately 20-40 ft (6-12m) along the carrier cable between the top and bottom brackets, and at any point along the system where the cable may abrade against the structure. Cable guides should be staggered along the system to reduce harmonic effects of the wind, such as at 23 (7.01), 25 (7.61), and 27 (8.23) feet (m) intervals. For high wind areas “L” shaped cable guides may be used. The “L” shaped cable guides should be alternated with opening on the left, then right, etc. up the structure. The Latching cable guides are also available.

Direct Connection to Structure:
See Figure 11 for a typical installation of a cable guide. Some cable guides utilize rung spacers and clamp plates while others do not (see Figure 11). Install the cable guide using the hardware provided. Do not substitute other fasteners. Torque fasteners to 20-25 ft-lbs (27-34 N-m).

3.7 TENSIONING THE SYSTEM:
- Depending on the length of the system, and the environment in which the system is installed, it may be necessary to periodically re-tension the system. Extreme temperature ranges and very long systems will likely require periodic re-tensioning.

Carrier Cable Tension Adjustment:
1. See Figure 9. Thread tensioning nut (A) onto end of tension rod (B) so that 3-5 threads are exposed below the nut.
   - Insert cable into saddle clamps (C). Lift up on tensioner assembly until tensioning nut bottoms out on bottom washer (D). Tighten saddle clamp nuts and torque to 35 ft-lbs (47.5 N-m). Tighten tensioning nut until groove (E) is exposed above top bracket. Tighten jam nut (F) against tensioning nut. Cut off excess cable just below the lower saddle clip.

4.0 IDENTIFICATION AND INSPECTION AFTER SYSTEM INSTALLATION:
A. Install the installation and service label onto the structure in a prominent location. Use the steel wire provided with the label to attach it to the structure. Before installing the label, mark the following:
   - Installation Date
   - Installed By
   - Maximum Users Per System
   - System Length
   - Use a metal letter stamp to mark the label. Record the system identification information in the Installation Checklist at the end of this manual.

B. After installation conduct a final inspection of the system as follows:
   - Ensure all fasteners are in place and properly tightened.
   - Ensure the carrier cable is properly tensioned. Do not use the Lad-Saf™ system if the bottom of the cable is not secured/tensioned with the bottom bracket assembly.
   - Ensure the carrier cable assembly is installed per Figure 10.
   - Ensure the carrier cable does not abrade against the structure at any point.
   - Ensure the system information is recorded on the label.
5.0 INSPECTION

5.1 INSPECTION FREQUENCY:
For information on inspection frequency, inspection steps and use of the Lad-Saf Flexible Cable Safety System, refer to instructions for use (IFU) 3M Fall Protection manuals 5908555, 5908556 and 5908301.

5.2 RFID TAG:
The Lad-Saf™ system includes a Radio Frequency Identification (RFID) tag (Figure 17). The RFID tag can be used in conjunction with a handheld reading device and web based portal to simplify inspection and inventory control and provide records for your fall protection equipment. If you are a first-time user, contact a 3M Fall Protection Customer Service representative (see back cover). If you have already registered, go to 3M.com/FallProtection. Follow the instructions provided with your handheld reader or on the web portal to transfer your data to your web log.

6.0 MAINTENANCE, SERVICING, STORAGE

6.1 If the carrier cable becomes heavily soiled with oil, grease, paint, or other substances, clean it with warm soapy water. Wipe off the cable with a clean, dry cloth. Do not force dry with heat. Do not use acid or caustic chemicals that could damage the cable.

7.0 SPECIFICATIONS

7.1 All top and bottom brackets, cable guides, carrier cable, and fasteners are made of galvanized or stainless steel. Contact 3M Fall Protection for material specification details if required. The LAD-SAF™ system, when installed according to the installation instructions, meets OSHA 1910.140, OSHA 1926.1053, OSHA 1910.29, OSHA 1926.502, ANSI Z359.16, CSA (Z259.2.5) and CE (EN353-1:2014+A1:2017) requirements.

Declaration of Compliance: www.3M.com/FallProtection/DOC

8.0 LAD-SAF SYSTEM LABELING

Please reference the User Manual supplied with the Lad-Saf™ Detachable Sleeve for proper use and maintenance of this system.

The Lad-Saf Flexible Cable Safety System Tag must be securely attached and fully legible. (See Figure 17) System Tag contents are listed in Table 1.

The System Tag includes the following warning:

WARNING: Failure to heed warnings may result in serious injury or death. Manufacturer’s instructions supplied with this product at time of shipment must be followed for proper installation, use, inspection and maintenance. Unauthorized alteration or substitution of system elements or components is prohibited. Use only with compatible personnel protective equipment as per manufacturer’s instructions. Before each use inspect system visually for defects. Formally inspect system in accordance with instructions at least annually, or in accordance with specified inspection criteria for the structure the system is secured to. Refer to instructions for information on periodic formal inspections. Minimum spacing of users of this system is 20ft (6m). Do not remove this label.

A Single Point Anchor Warning is stamped on the washer at the top of Systems L1, L2, L3 and CE1. See Table 1 and Figure 18. For the M1 and M2 systems, the same information is stamped onto the D-ring bracket. See Figure 4.
